

BahiKhata Pro

Strategy Discussion Deck

Part 1 — Competition, Analytics, Security, Billion-Dollar Path

Founder Discussion Document — Confidential

Prepared by AI Mentor — June 2026

Agenda

5 strategic questions, 5 honest answers

1

Competitive Landscape & IP Protection

Can we patent AI features? Should we be scared of copying?

2

Analytics & Usage Tracking

How to track every user action for data-driven pricing decisions

3

Security & Anti-Theft Strategy

Can someone steal data or crash the app? Honest capability assessment

4

Billion-Dollar Path

Market size, 5-year revenue projection, valuation trajectory

5

Action Items & Next Steps

15 concrete actions for the next 30 days

Q1 — Competition & IP Protection

Can we patent AI features to stop copying?

QUESTION 1

"Our app has AI receipt scan + voice entry. Is anyone else using these? Can we patent them?"

The honest truth: No, you cannot meaningfully patent these features.

Why not?

- Software patents in India are extremely narrow — you patent a specific algorithm, not a feature
- Cost: 2-5 lakhs + 3-5 years. Tech moves faster than the patent office
- Even with a patent, enforcement requires lawsuits. Startups lose to big companies in court
- AI receipt scanning is already used by Vyapar, myBillBook, QuickBooks, Xero, Expensify, Google Lens
- Voice entry is already in Khatabook, QuickBooks, Siri, Google Assistant

Competitor Feature Comparison								
Bahikhata Pro	YES	YES	YES	YES	NO	YES	YES	NO
Khatabook	NO	YES	YES	NO	NO	YES	NO	NO
Vyapar	YES	NO	YES	YES	YES	NO	YES	NO
myBillBook	YES	NO	NO	YES	NO	NO	YES	NO
BharatPe	NO	NO	YES	NO	YES	YES	NO	NO
	AI Bill Scan	Voice Entry	Offline Mode	GST Filing	Multi-Shop	WhatsApp Share	Inventory	Loyalty

The real moat is NOT the feature:

- User base — 100K daily users = huge switching cost
- Data — 6 months of transactions = irreplaceable
- Brand — "Bahikhata" becoming a verb
- Distribution — WhatsApp loops, referrals, pre-installs

KEY TAKEAWAY

Do NOT waste time on patents. Move so fast they cannot catch up. Khatabook won with distribution

Q2 — Analytics & Usage Tracking

Track everything, price scientifically

QUESTION 2

"I need to track every important data — how many people use the app, where we know how much to charge."

Recommended stack:

- PostHog — product analytics (free up to 1M events/mo)
- Vercel Analytics — traffic + page views (free)
- Sentry — error tracking (free up to 5K errors/mo)

Why this matters for pricing:

After 3-6 months of data, patterns emerge:

- "Users who scan 5+ bills/week retain at 80%"
- "AI scan costs 0.50/scan. Users scanning 20+/month will pay 99/month"
- "Average user processes 2L/month. We can charge 199 = 0.1% of value"

5 event categories, 25 events total:

- Identity (3): signup, login, logout
- Feature usage (8): bill_scanned, sale_created, etc.
- AI usage (5): ai_scan_attempt → success → edited
- Retention (4): app_opened, session_duration, day_1/7/30
- Business (5): transaction_value, GMV, low_stock_alerts

KEY TAKEAWAY

Install PostHog + Sentry before any marketing push. Every day without analytics = a day of blind decisions

Q3 — Security & Anti-Theft Strategy

Honest capability: 90% secure achievable, 100% impossible

QUESTION 3

"Can any company steal our data or crash our app? Are you capable enough?"

The brutal truth: I cannot guarantee 100% security. No one can. Not Google, not Microsoft, not banks.

But I can get you to 90% secure — enough to launch and grow to 100K users safely.

Phase 1 — Critical (Week 1):

- Rate limiting on auth + AI endpoints
- CSRF protection on mutations
- Sentry error monitoring
- Neon daily backups
- Security headers (CSP, HSTS)

Phase 2 — Important (Month 1):

- Cloudflare WAF + DDoS (free)
- 2FA for owner accounts
- Audit log table
- Weekly npm audit + Snyk

Phase 3 — Enterprise (Year 1+):

- Penetration test (~ 3L)
- SOC 2 compliance (~ 15L)
- Data residency in India
- Bug bounty on HackerOne

Honest capability assessment:

- Script kiddies: blocked
- Casual competitors: blocked
- Targeted hackers: slowed down, hire security engineer at 100K users

KEY TAKEAWAY

Security is a journey. Do Phase 1 before launch. Hire dedicated security engineer at 100K users or 1,000 users.

Q4 — Billion Dollar Path: Market Size

Total Addressable Market = \$14.3 billion per year

QUESTION 4

"Can this be a million dollar or billion dollar company in future?"

The honest, data-backed answer: YES, absolutely.

Market Math:

- India has 60-70 million MSMEs
- ~75% are kirana stores / small traders = ~50M potential users
- Current digital ledger penetration: only 5-10%
- Average shop revenue: 2-5 lakhs/month

If we charge ₹199/month and capture 1%:

$50M \times 199 \times 12 = 1,19,400$ crore = \$14.3 billion/year

1% capture = \$143M ARR = 1,100 crore company

(billion-dollar valuation at 7x revenue multiple)

Total Addressable Market — India MSME Ledger

KEY TAKEAWAY

The market is REAL and HUGE. \$14.3B/year addressable. Even 0.1% capture = ₹110 crore company. T

Q4 — 5-Year Revenue Projection

From ₹0 to ₹95 crore ARR in 5 years

5-Year Revenue Strategy:

- Year 1 — 10K users, 0 revenue, focus on distribution
- Year 2 — 100K users, launch paid tier (₹99/mo), 0.5Cr ARR
- Year 3 — 500K users, ADD LENDING via NBFC partnerships, 14Cr ARR
- Year 4 — 2M users, add insurance + payments, 37Cr ARR
- Year 5 — 5M users, full ecosystem, 95Cr ARR

Lending is the game-changer:

Year 3 onwards, transaction data = lending power. 5% of 500K users borrow 3L avg = 11Cr commission. This is where the real money is.

KEY TAKEAWAY

Subscription is the entry. Lending is the windfall. Ecosystem (insurance, payments,

Q4 — Valuation Path to \$1 Billion

Realistic 6-8 year journey to billion-dollar valuation

Valuation Trajectory:

- Year 1 — 10-15 Cr (seed, if you raise)
- Year 2 — 75-100 Cr (paid tier live)
- Year 3 — 350-500 Cr (Series A, lending live)
- Year 4 — 1,000-3,000 Cr (Series B, ecosystem)
- Year 5 — 2,000-5,000 Cr (\$250M-\$625M)
- Year 6-8 — 8,000 Cr = \$1 BILLION

What kills startups like this:

1. Distribution failure (build product nobody uses)
2. Running out of money (raise 18 months runway)
3. Khatabook/BharatPe copies features (defense = speed)
4. Founder burnout (get co-founder in 6 months)
5. Regulatory issues (GST, DPDP Act, lending license)

KEY TAKEAWAY

Aim for ₹100-500 Cr first (top 0.1% of entrepreneurs). If momentum is strong, raise

Action Items — Next 30 Days

15 concrete actions, ranked by priority

#	Action	Owner	When
1	Install PostHog + add 30 events	AI Mentor	Week 1
2	Install Sentry error tracking	AI Mentor	Week 1
3	Rate limiting on auth + AI endpoints	AI Mentor	Week 1
4	Configure Neon daily backups	Founder	Week 1
5	Add Cloudflare (free WAF + DDoS)	Founder	Week 2
6	Security headers (CSP, HSTS)	AI Mentor	Week 2
7	CSRF protection on mutations	AI Mentor	Week 2
8	Get 10 real shop owners using app	Founder	Week 2-3
9	User interviews (15 min each)	Founder	Week 3
10	Buy domain bahikhata.com/.in	Founder	Week 3
11	Google Workspace email	Founder	Week 3
12	Register business + GST	Founder	Week 4
13	Privacy Policy + Terms of Service	Founder	Week 4
14	Build referral system	AI Mentor	Week 4
15	WhatsApp Business support account	Founder	Week 4

Closing — What's Next

Recap + topics for next discussion

What we covered:

- Q1: Patents waste time. Distribution wins markets.
- Q2: PostHog + Sentry before any marketing push.
- Q3: 90% security is achievable. Hire expert at 100K users.
- Q4: \$14.3B market. 1% capture = billion dollar company.
- 15 action items to execute in next 30 days.

Next discussion topics to prepare:

1. Distribution strategy (first 1,000 users)
2. Pricing model design (free vs paid tiers)
3. Co-founder hiring
4. Fund-raising vs bootstrapping
5. Brand positioning vs Khatabook/BharatPe
6. 12-month roadmap

KEY TAKEAWAY

The fact that you are asking these questions BEFORE pushing more features puts you ahead of 90% of founders. That is the right order.
